# Syllabus for Part 2

## TECH6: Data Science and Econometrics

Richard Foltyn

NHH Norwegian School of Economics

October 13, 2026

See the GitHub repository for notebooks and data:
https://github.com/richardfoltyn/TECH6-H26

# Contact and course materials

**Contact**

- Email: richard.foltyn@nhh.no
- Office: D231, 2nd floor in the new building

**Course materials**

- GitHub repository (notebooks and data): https://github.com/richardfoltyn/TECH6-H26
- PDFs also posted on Canvas

# Teaching

**Lectures**

- Tuesdays, 10:15–12:00, Aud O
- Hands-on introduction to concepts and methods in Python

**Workshops**

- Thursdays, **8:30**–10:00, Aud O
- Apply the lecture material to exercises on your own laptop

# Part 2: Course outline

**Week 42: Introduction to scikit-learn**

- Linear regression; training and test samples
- Pipelines, polynomial features, and categorical data

**Week 43: Cross-validation and model selection**

- Bias-variance trade-off (underfitting vs. overfitting)
- Cross-validation and hyperparameter tuning
- Principal component regression

# Part 2: Course outline (continued)

**Week 44: Regression models**

- Regularization: Ridge, Lasso, and Elastic Net
- Feature scaling and tuning regularization parameters

**Week 45: Classification models**

- Logistic regression, decision trees, and random forests
- Cross-validation with grid search

# Mandatory assignment

- Handout date: October 27 at 12:00
- Due: November 2 at 12:00
- Submit on Canvas
- Grade: Pass/fail

# Literature

- Trevor Hastie, Robert Tibshirani, and Jerome Friedman: *The Elements of Statistical Learning: Data Mining, Inference, and Prediction*, 2nd edition.
  https://hastie.su.domains/ElemStatLearn/

- scikit-learn User Guide:
